

**Filtration media engineered
specifically for canmakers**

New **REEMAY[®]
MICROCELL[®] II**

New Reemay[®] Microcell[®] II filtration media was engineered specifically for canmakers. That's why it offers the high efficiency, extended filter life and overall cost/performance that you need for savings.

Its ability to withstand high humidity, wet conditions and temperatures up to 250° F has made it the media of choice on both Schneider and Womack pressure filters. And when you add strength, surface stability and chemical resistance to its list of benefits, it's easy to understand why canmaking plants are switching over to Reemay Microcell II.

New Reemay Microcell II is being used with current technology and is the best septum for Acticel C, the newest D & I process technology.

Don't wait! Reduce your costs and increase your savings now with Reemay Microcell II!
