

# How do you know? Filters 101

A look inside...

**Engineered for pool and spa use** with continuous filaments so it will not ravel or fray. Plus, no binders that can dissolve and weaken the fabric during use.

**Reemay is a polyester fabric** and offers strength and durability.

**Unique construction** holds sharp, even pleats—for better filtering because pleated fabric provides more surface area in less space.

**Reemay fabric is durable and strong enough to perform,** cleaning after cleaning. That's why it's been the industry standard for 30 years.

**Reemay is resistant to chemicals,** an important characteristic for the treated water in a pool or spa.

**Easy to clean** with little water waste. Easy to replace. Available with Microban® antimicrobial protection manufactured into the fiber.

A Fiberweb Brand

## Reemay® Beats the Competition

For more than 30 years, Reemay® has been the leader in pool and spa media for two reasons.

First, Reemay is stronger than the competition. If a media is torn, it will not filter as it's designed to, and that can result in water that's not as clean as you want. More durable Reemay means cleaner water, fewer replacements for a lower cost and more time for enjoyment.

Second, a filter is supposed to remove contaminants from the water, but some media have fibers that break and get into the system. Reemay is made of continuous fibers to reduce the likelihood of breakage and loss.

## Caring for Your Cartridge Filter with Reemay

Reemay is easy to care for because of its strength and low breakage and loss characteristics. Cleaning it is as easy as running a garden hose...which is exactly how you clean it!

You'll know your filter needs cleaning when there is an increase of 10 pound per square inch (psi) or more above the normal operating pressure listed in the owner's manual. The pressure can be found on the cartridge's housing canister.

## To Clean the Cartridge:

- 1 Remove the cartridge from the housing, following the manufacturer's instructions.
- 2 Rinse the cartridge with a garden hose from both the inside and the outside to remove coarse dirt and debris. Be sure to wash between all pleats. Fine particles of dirt are more easily removed by brushing the cartridge when it's dry. It's not necessary to remove every speck of dirt.
- 3 Replace the cartridge in the housing, again following the manufacturer's instructions.

Consult your pool and spa retailer if there are oils or calcium or mineral deposits on your cartridge.

 **Microban**® antimicrobial product protection For even greater protection, choose Reemay® with Microban® antimicrobial product protection. The Microban protection helps reduce the growth of damaging microbes. It's built in during the manufacturing process so it won't wash off or wear away.
